2014	1
2015	2
2016	4
2017	1
2018	3
2019	0

dtype: int64

Insight

Some seasons had rain interruptions causing D/L method usage.

However, it occurs in very few matches overall.

xiii) Different results for matches

```
matches['result'].value_counts()
```

result	count
normal	743
tie	9
no result	4

dtype: int64

Insight

Most IPL matches end with normal results.

A few matches may result in ties or no results.

xiv) How many times a team won the toss

Insight

Certain stadiums host more IPL matches due to team popularity and infrastructure.

These venues often have large fan attendance and better facilities.

Conclusion

This IPL data analysis project helped understand team performance, player achievements, and match trends across different seasons. The analysis showed how factors like toss decisions, venues, and player performances influence match results. Overall, the project demonstrates how data analysis can provide useful insights about IPL matches and team strategies.
